

HANFORD SITE PERFORMANCE REPORT	ALL HANFORD PROJECTS Total OSHA Recordable Case Rate	MARCH 1998
------------------------------------	---	------------

OSHA Recordable Cases have been overall decreasing sitewide over the past two years. This represents a significant improvement in Worker Safety. Improvement appears to be continuing, but is not yet statistically significant.

Benchmarks: DOE and Contractors CY 96 Rate = 3.4, Contractor = 3.6, Construction = 5.3, Research = 3.4

The PHMC, ERC, and PNNL long term average rates are all below their respective DOE benchmarks. When CY 1997 DOE safety data is available, the benchmarks will be updated with this data.

Within the Project Hanford Management Contract (PHMC) Team, DynCorp and Duke Engineering Services Hanford (DES) have high OSHA recordable case rates for fiscal year 1998 to date. The DES Total OSHA Recordable Case Rate for FY 1997 was 4.4, which was high compared to the other PHMC projects. Their high case rate for FY 1997 in conjunction with the high rate for FY 1998 does indicate that the Spent Nuclear Fuels project (DES) should be focused upon for safety improvement. The DynCorp high rate is less serious, as DynCorp showed a strong decreasing trend in their accident rates last fiscal year. The DynCorp high rate is due to spikes in October 1997 and January 1998 cases. Without these two months, the DynCorp OSHA recordable rate would be the same as the overall PHMC rate. Also, DynCorp Lost/Restricted Workday Case Rate and Severity Rates are closer to the respective PHMC overall rates versus DES.

Page B-7 provides a further tabulation of cases of all types by Project and Contractor within the PHMC Team.
